

MCLEOD AND DOSSIER SYSTEMS INTEGRATED SOLUTION

SUPERIOR

FLEET MANAGEMENT

McLeod Software has partnered with Dossier Systems to deliver an integrated TMS and Maintenance Management solution to help you achieve maximum operational efficiency and drive profits. The Dossier-LoadMaster® Enterprise Integration provides bi-directional information flow for both business and maintenance data. The most important information to support your business decision process will get to the right place faster, and without the risk and effort of manual transfer or duplicate data entry. The result is improved fleet management.

In trucking and transportation, your fleet is the lifeblood of your business. Breakdowns typically cost 4 times as much as the scheduled maintenance that would have prevented them. But that's only the beginning - consider the cost of delivery delays in terms of customer and driver expense, goodwill, detention, and lost revenue... every breakdown is a knife in the side of your business. Dossier helps you avoid breakdowns and understand the hidden potential - and minimize the cost - of operating your fleet.

Whether you own your equipment or use Owner-Operators, staying current with preventive maintenance is the best insurance against breakdowns and road calls. Relegating this important function to a clipboard, whiteboard, or excel, works counter to profitability and customer satisfaction. Use software that was designed for the job; Dossier has an intuitive user interface that's great for your maintenance department, and in the process captures all of the information that you need to make key decisions:

- Rebuild or Replace
- Buy or Lease
- Manufacturer and Model selections
- Perform Maintenance in-house or outsource
- Keep using the same tire brand, or switch
- And many, many others...

Dossier Systems' staff consists of fleet industry experts that will guide you through the implementation process of the Dossier software. They listen closely to your needs and share their expertise so that you make the best decisions. They understand the Loadmaster system and know how to configure Dossier to help you get the most out the Dossier-LoadMaster Integration.

Key Benefits of the Integrated Solution

- Maintenance and Financial Data Moves between the Systems Automatically.
- Increased Productivity and Accuracy by Eliminating Double-Entry and Manual Processes.
- Records Created/Updated from System of Record.
- Customer, Owner/Operator, Vendor, and Asset Data is entered once and synchronized between systems.
- Maintenance Due and Asset Status sent from Dossier to LoadMaster for Dispatch Planning.

Maintenance and Asset Data

Completing preventive maintenance (PM) on time is critical in keeping your assets on the road and operating safely, efficiently, and cost-effectively. With the Dossier-LoadMaster Integration, getting up-to-date meter readings happens automatically as Hub Readings are sent from LoadMaster to Dossier. When Dossier determines a PM is due, it notifies LoadMaster, and when the unit is in the shop, Dossier will push status updates to LoadMaster to reflect that it is unavailable; or when maintenance is complete, ready to go back into service.

LoadMaster		Dossier
PM Message	←	PM Message
Service Status	←	Unit Status
Tractor	←	Unit/Category
Trailer	←	Unit/Category
Hub Reading	→	Meter Reading
Fuel Ticket	→	Fuel/Meter Item
Mobile Communications	→	Work Pending

defining Customers, Owner/Operators (if appropriate), and Vendors. This data is then used to auto-populate Customer and Vendor information in the Dossier database. Dossier can be configured to disallow "local" creation or editing of this information ensuring systems stay in synch.

Dossier sends all maintenance-relevant cost data, such as purchased parts, internal shop work, and external work, to LoadMaster once transactions are complete. This simplifies the creation of vouchers, and managing receivables and payables data in LoadMaster.

LoadMaster		Dossier
Customer	→	Customer
Owner	→	Customer
Vendor	→	Vendor
Voucher	←	P.O. Receipt
Voucher	←	External Work
Receivable	←	Repair Order
Driver Deduction	←	Repair Order
VM Journal Entry	←	Repair Order

Billing and Accounting Data

The Dossier-LoadMaster Integration streamlines financial transaction processing for maintenance activity, inventory, and parts and services purchasing. Since LoadMaster will manage most financial transactions, it serves as the system of record for

System Requirements

- Dossier Professional Edition v6.3 or higher and the McLeod LoadMaster Integration Option.
- McLeod Software LoadMaster Enterprise version 9.2 or higher and the LoadMaster Vehicle Maintenance Interface Module License.
